

BATTLECLOUD UNLEASH YOUR CLOUD POTENTIAL

THE POWER OF CLOUD

Welcome to BattleCloud, Fight Club Tech's revolutionary cloud platform that empowers you to deploy your workloads on the cloud that best meets your needs.

With unparalleled flexibility, robust security, and top-tier performance, BattleCloud seamlessly integrates with leading cloud services like AWS, Microsoft Azure, Google Cloud Platform, and more.

BATTLECLOUD TIERS

BattleCloud – Ultimate Private Cloud (UPC)

Fight Club Tech's Ultimate Private Cloud delivers physically isolated, dedicated resources for compute, memory, and storage to meet the highest security and compliance standards. Our AI-driven, software-defined infrastructure scales rapidly while simplifying your operations, ensuring peak performance and security.

BattleCloud – Dynamic Virtual Cloud (DVC)

Our Dynamic Virtual Cloud provides secure, enterprise-class solutions on a robust, scalable, and fully redundant architecture for your production workloads. Benefit from production-grade "instant capacity" for backup and disaster recovery within a multitenant environment.

BattleCloud – Intelligent Storage Solutions (ISS)

BattleCloud's software-defined storage platform is built for the most demanding applications and workloads. Offering a wide range of storage protocols and configurable performance tiers, our platform supports Hyperscale, Dedicated, Multitenant, and Data Protection workloads with rigorous design and Service Level Objectives (SLOs).

PARTNERS

SELF-SERVICE CAPABILITIES

By integrating seamlessly with both AWS and VMware, BattleCloud enables VMware Cloud on AWS users to harness the advanced capabilities of Fight Club Tech's Enterprise Data Cloud. Powered by industry leaders such as Fortinet, VMware, Zadara, and Zerto, our platform supports powerful enterprise use cases, including:

- Creation and import of new virtual machines
- Resource modification (CPU, memory, disk, network)
- Snapshot protection and recovery
- Custom virtual machine templates
- Comprehensive instrumentation
- Software-defined auto-tiering storage

Cloud Enablement Features & Services

- **99.999% Uptime:** BattleCloud offers a 99.999% network uptime SLA standard with all configurations.
- **Diverse Software Selection:** Configure your private cloud with a variety of operating systems, including CentOS, FreeBSD, and Windows.
- **Future-Proof Scaling:** BattleCloud is designed to meet your current needs and scale as your infrastructure grows.
- **Advanced Management Tools:** Our platform includes basic monitoring, advanced application performance monitoring, and AI-powered Application Resource Management for real-time performance, compliance, and cost optimization.
- **Unified Cloud Management:** Our DevOps-focused approach to workload and application performance management supports on-premises and hybrid clouds, high-scale applications, containers, serverless workloads, and hyperscale environments.

DATA SECURITY FOR PRIVATE CLOUD SETUPS

FIREWALL & VPN

BattleCloud offers **self-service capabilities**, empowering you to **define and manage security policies**, enabling **granular control over access** to your environment. The **software-defined security** allow for **micro-segmentation**, enhancing the protection of individual virtual machines. Our architecture supports **scalability up to 40G**. Plus, it's **HIPAA-ready**, ensuring compliance with stringent regulatory requirements.

THREAT MANAGEMENT

BattleCloud's threat management services include **software-defined DDoS mitigation, intrusion detection, and prevention systems**. These advanced security measures are designed to proactively identify and neutralize threats, ensuring your cloud environment remains secure. Our solutions are also **compliant with various regulatory standards**, including **HIPAA**.

SECURITY INFORMATION & EVENT MANAGEMENT

BattleCloud's Security Information and Event Management (SIEM) system offers **comprehensive log management** and **event correlation services** through our **Virtual Security Operations Center (SOC)**. The system is designed to help you meet **HIPAA requirements**, perfect for industries needing high security and compliance.

OPERATING SYSTEM PATCH MANAGEMENT

BattleCloud's Operating System Patch Management service ensures that your systems are always protected with the latest security patches. This service includes **comprehensive log management and event correlation** provided by our Virtual SOC, and is **compliant with HIPAA standards**.
